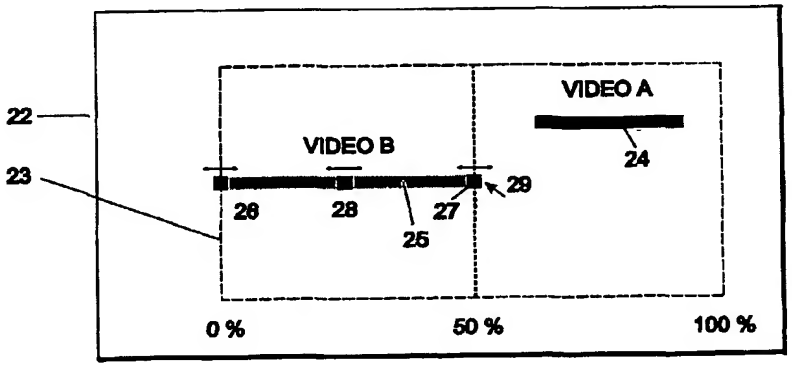
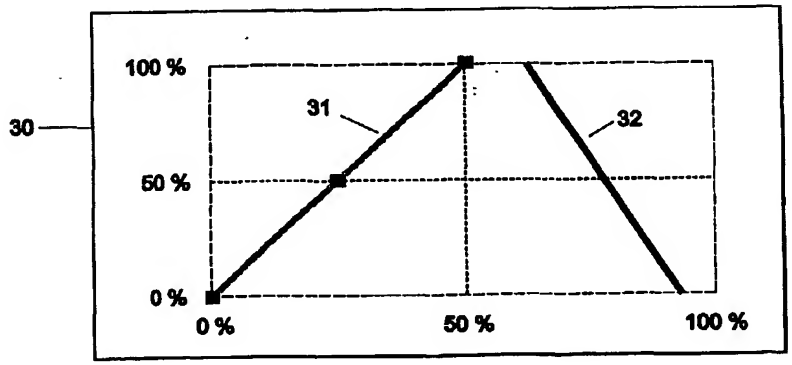
(54) Title: METHOD AND APPARATUS FOR PROCESSING SIGNALS





(57) Abstract: In a method and an apparatus for cross-fading video signals, each video signal to be cross-faded is assigned a specific cross-fading function. A graphical user interface (22 to 33) is provided for inputting the cross-fading functions. The graphical user interface (22 to 33) has different fields (22, 30, 33) for inputting parameters of the cross-fading functions (31, 32) which are written to a store (14). For the control of the cross-fading operation by a control computer (13), the cross-fading functions are read from the store (14).
